gfi.com/mailessentials

GFI MailEssentials protects your email network against email-borne viruses and other malware threats using advanced email filtering technologies and up to five antivirus scanning engines.

With a spam capture rate of over 99% and minimal false positives, IT administrators can rest assured that company email is secure and spam-free.

GFI MailEssentials puts control in the hands of the administrator and user, with a central, web-based email management dashboard, and email reporting tools.

GFI MailEssentials is available in three editions:

- Unified Protection Edition: Comprehensive server-based solution, that keeps email free from spam and protects the network against viruses and other email-borne threats.
- Anti-spam Edition: Server-based protection that keeps email free from spam and blocks email phishing.
- EmailSecurity Edition: Multi-layered security that protects the network from viruses and other malware.

## Features available in the Anti-spam edition:

- SpamRazor: Removes unwanted email messages based on email reputation, message fingerprinting and content analysis.
- Anti-phishing: Blocks emails that contain links pointing to known phishing sites or typical phishing keywords.
- Kaspersky, Sophos and Cyren antivirus engines are optional. GFI MailEssentials can use up to five antivirus engines to scan inbound email and respond to threats.

Features available in the EmailSecurity Edition:

- Avira antivirus: Protects data against all types of malware including ransomware, Trojans and spyware with very little performance impact.
- BitDefender antivirus: A very fast and flexible antivirus engine that can recognize and scan a wide range of formats to ensure virus-free messages.
- Trojan and Executable Scanner: Scans for Trojans and malicious executables. Quarantines any executable that performs suspicious activities, such as accessing a modem, making network connections or accessing the address book.
- Automatic removal of HTML scripts: Protects against attacks launched by links in emails.
- Email Exploit Engine: Blocks exploits embedded in an email that can execute on a recipient's machine.
- Kaspersky, Sophos and Cyren antivirus engines are optional. GFI MailEssentials can use up to five antivirus engines to scan inbound email and respond to threats.

Features available in all editions:

- Advanced content filtering.
- Full Unicode support.
- Control of multiple GFI MailEssentials servers from the same console.
- Support for virtual environments.

Benefits at a glance

Support for most industry-leading messaging platforms including Microsoft® Exchange 2007, 2010, 2013 and Lotus® Domino®
