

Nagios Log Server

Nagios Log Server is designed to collect, analyze, alert, and archive log events, providing you with extended insight into the behavior of the servers, users, network devices, and applications in your infrastructure.

Ease of Use

Nagios Log Server greatly simplifies the process of searching your log data. Set up alerts to notify you when potential threats arise, or use queries and dashboards to narrow down and visualize events. View all of your data in one location, and protect it with built in clustered redundancy. Quickly configure your sources to feed their log data events upstream with built-in setup guides.

Network Security

Log Server is a premier solution that's perfectly designed for security & network auditing. Easily create alerts from the web-interface based on queries and thresholds most important to you. Notify users via email, SNMP traps, NRDP, or execute a script to ensure quick problem resolution.

Adaptability

Nagios Log Server has a fully accessible API allowing for complete customization to fit the needs of your network. Integrate it with thirdparty solutions for seamless integration with your current infrastructure.

User Management

Multitenancy features enable IT teams to work together efficiently. Admins can easily set access permissions for each user to determine whether they can view, create, edit, and delete alerts and configurations, along with whether they have API access. Dashboards and queries can be per-user, or shared globally with all users.

Highly Scalable Architecture

Log Server has a highly scalable architecture, so as your organization grows you can easily add additional Log Server Instances to your monitoring cluster. This allows you to quickly add more power, speed, storage, and reliability to your overall monitoring system. Nagios Log Server is designed for organizations of any size and can adapt with the click of a button.

Your Data In Real Time

Viewing your log data within the context of time is the most important thing about monitoring. Log Server allows you to view log data in real time, providing the ability to quickly analyze and solve problems as they occur. This keeps your organization safe, secure, and running smoothly.

Customizable Dashboards

Users can create custom dashboards in the web-interface to see quick views of data most important to them. Users can also easily share dashboards with a custom URL to enhance team collaboration.

Network Insights

Nagios Log Server provides users with advanced awareness of their infrastructure. Dive deep into network events, logs, and performance standards. Use Log Server to provide the evidence necessary to track down security threats, and quickly resolve vulnerabilities with built-in alerts and notifications.
