

N-able RMM

Easy, cloud-based desktop management

Get the visibility and control you need to stay on top of everything—and automate routine tasks to save time and increase productivity. Plus, provide fast, efficient support to end users working from home or remote offices.

IT departments are facing more pressure than ever before. BYOD, a distributed workforce, and evolving technologies have created greater network complexity—and greater risk for potential security breaches. In response, many organizations use multiple disparate point solutions to help increase visibility, efficiency, and productivity.

Why bounce between multiple tools when N-able™ RMM can help get complex networks under control with one lightweight solution? RMM lets you monitor hundreds (or thousands) of desktops, anticipate end users' needs, and get alerts to prioritize your day. Save time by automating routine tasks and helping keep users safe and productive with a comprehensive suite of best-in-class security services delivered as part of a single integrated platform.

The RMM platform also includes remote support capabilities so you can access and repair workstations no matter where your end users are. Even better, you can resolve problems without impacting end users' productivity by accessing a remote command shell behind the scenes.

Our cloud-based SaaS model means you don't have to worry about costly on-premises appliances or software updates. Ramp up quickly with default settings and a library of automation scripts. Free onboarding assistance and 24/7 support are available to help ensure your success.

Key benefits

- Get up and running in minutes—easy to use with little to no learning curve
- See where to focus first with a single dashboard and clear alerts
- Reduce support calls by proactively monitoring and maintaining workstations
- Connect to remote workstations and perform repairs without disturbing users
- Automate your daily operations so you can focus on strategic projects
- Save time and deploy software—to any or all devices—with one click
- Track workstations and installed software to help ensure compliance

Features at a glance

Remote monitoring

Easily monitor workstations, servers, network devices, and mobile devices from within a unified dashboard.

Active discovery

Identify new devices as they come onto the network and bring them under management with a single click.

Remote access

Resolve tickets faster by repairing any workstation or server without leaving your desk.

Automation and scripting

Use our library of existing scripts to automate routine tasks or customize your own using a simple drag-and-drop interface—no scripting knowledge needed.

Patch management

Easily keep all of your software up-to-date to prevent cyberattacks and optimize system performance. RMM lets you automate the process, set patching windows, and check patch status.

Mobile device management

Monitor, maintain, and keep track of company- and employee-owned mobile devices.

Reporting

Track assets and installed software. Generate the reports you need to make better purchasing decisions.

Ticketing

Integrate with supported help desk tools and manage tickets from N-able RMM.

Cross-platform

Deliver the highest levels of support to your Windows®, Mac®, and Linux® users.

Become part of the N-able family and add integrated solutions when you're ready to grow.

Managed antivirus

Leverage an antivirus solution that employs near-perfect malware protection.

Web protection

Safeguard users from malicious websites that could harm your network and devices.

Backup and recovery

Back up files faster and restore full systems within minutes if a disaster occurs.

Disk encryption

Protect customer devices by rendering data on their machines unreadable to unauthorized users.
