

N-able N-central

Security-first unified endpoint management built to defend, optimize, and scale

Secure, manage, and scale your environment all from one platform

N-central helps IT teams transform endpoints into a resilient first-line of defense while streamlining operations with automation, real-time visibility, and intelligent workflows.

Unify and consolidate IT solutions

- **Reduce cost:** Replace multiple tools with one solution for asset management, remote access, monitoring, patching, and vulnerability management.
- **Unify teams:** Bring ITOps and SecOps together for better visibility, efficiency, resiliency.
- **Connect your stack:** Easily create end-to-end business workflows that streamline efficiency.

Real-time visibility across every endpoint

- **Manage all endpoints in one place:** Windows, macOS, Linux, cloud, and network devices—all controlled from a single, unified platform.
- **No blind spots:** Continuous scanning with automated onboarding for complete coverage.
- **Stay ahead:** Real-time monitoring with proactive alerts to prevent downtime and accelerate remediation.

Autonomous endpoint hardening

- **Enforce compliance:** Automatically apply security policies and controls aligned with your security frameworks.
- **Continuous resilience:** Detect and remediate vulnerabilities in real time with rapid patch deployment to outpace evolving threats.
- **Prevent drift:** Identify configuration anomalies before they compromise your security posture.

Intelligent IT automation

- **Improve helpdesk productivity:** Resolve issues faster with proactive monitoring and self-healing, while technician tools enable smooth communication and boost satisfaction.
- **Dynamic workflows:** Build adaptive automation with our Infinity Core engine for intelligent IT management.
- **Streamline IT operations:** Automate software management and boost efficiency with AI Script Assistant and an intuitive drag-and-drop automation builder.

Infinity Core

The brain behind limitless IT automation

Other UEMs struggle with limitations like policy sprawl, lack of standardization, and duplicate configurations, often making environments unpredictable. Infinity Core is built differently, delivering unmatched flexibility and limitless targeting options so it works exactly how you need it to, no matter how simple or complex the use case.

By transforming raw data into adaptive automation, Infinity Core simplifies management and enforces security posture across thousands of endpoints.

- **Smarter automation:** Turn real-time insights into dynamic rules and workflows that evolve with your environment.
- **Compliance comes standard:** Automatically enforce standards and align with SLAs—even in the most complex infrastructures.
- **Scale without limits:** Confidently manage thousands of devices, maintain consistency, and keep operations agile as your environment grows.

Feature highlights

Built-in vulnerability and Patch Management

Instantly identify and prioritize vulnerabilities, then remediate by deploying patches and automating patch maintenance with rule-based approvals and rollback support across Windows, macOS, and Linux.

Actionable analytics

Dashboards built on Microsoft Power BI deliver deep device insights, compliance tracking, and export-ready reports.

Security depth

N-central empowers you to take on critical security workloads—automating scans, patching, encryption, software controls, and protocol enforcement with its secure-by-design architecture. Easily connect your existing EDR, XDR, and MDR solutions to extend protection and streamline operations from a unified platform.

Powerful Automation

Automate routine tasks such as patch deployment, software updates, and configuration changes using AI-assisted scripting or intuitive no-code workflows.

Helpdesk efficiency

Minimize tickets and manual effort with proactive monitoring, self-healing, and secure remote access. Technicians get the tools they need, real-time logging, multi-device sessions, and integrated voice, video, and chat, to resolve issues faster and keep users productive.

Support for CMMC compliance

Prepare your organization to meet CMMC 2.0 certification requirements using N-central's offer aligned with NIST SP 800-171.

**“Impressive automation and patching capabilities.
Built for power uses where competitors are not.”**

— Drew Alden, Lead Security Analyst/System Architect
